BUILD POWER PLANTS FOR MINES;
DISCOVER NEW COAL DEPOSITS

LEAD MINE TO GET 2,000-KILOWATT PLANT -- Slovenski Porocevalec, No 134, 7 Jun 50

The Mezica lead mine will soon acquire a 2,000-kilowatt hydroelectric power plant, 100 meters under ground. The Meza River will flow through pressure pipes into an abandoned pit 100 meters deep where turbines and generators will be installed. From the turbines the water will flow through a 7-kilometer tunnel into the old Meza River bed.

With the construction of this power plant, the mine and smelter will be amply provided with power.

A similar power project is contemplated for the molybdenum mine at Mackatica. The water from the Garvanica River will flow into a 200-meter pit where turbines will be installed. After leaving the turbines, the water will flow through a 2-kilometer drainage tunnel to the new flotation plant, which will exploit this water in the flotation process.

EXPLOITATION TO BEGIN SOON -- Tanjug, No 214, 1 Jun 50

Belgrade, 31 May -- Coal deposits of good quality were discovered recently near Zajecar in Serbia. The reserves of this area are estimated at over 5 million tons. Exploitation of these deposits is scheduled to start soon.

WILL PRODUCE SEMICOKE -- Borba, No 135, 7 Jun 50

Citluk, 6 June -- The "Soko" Brown Coal Mine, which is under the supervision of Djordje Radisavljevic, recently began the production of semicoke.
